SUMMARY

Cloud and IoT-focused developer with experience in building serverless applications, automated data pipelines, and edge-to-cloud systems using AWS and GCP. Skilled in Python, cloud infrastructure, and integrating IoT devices (Sensors and Actuators) with cloud services.

TECHNICAL SKILLS

Languages: Python, Bash, SQL, C

Cloud & Infrastructure: AWS (Lambda, S3, DynamoDB, SNS, SQS, EC2, RDS), GCP

Tools & Technologies: Git, REST APIs, LLM Integration (Gemini, OpenAI), Cloud Deployment

CERTIFICATIONS

- AWS Certified Solutions Architect
- AWS Certified Cloud Practitioner
- Google Cloud Associate Cloud Engineer
- Embedded Systems Application & IoT Programming

INTERNSHIP EXPERIENCE

IoT Intern, TokaiEbi (Hybrid)

December 2025 – March 2026

- Built a data ingestion workflow to collect and process real-time sensor data from edge devices using AWS services and Python.
- Developed a Lambda-based alerting system that notified us about device issues through an internal app.
- Integrated Raspberry Pi camera systems with Amazon S3 to store and access field video recordings remotely using scheduled cronjobs.
- Worked with industrial sensors over I2C and SPI communication protocols and connected device data to cloud applications.

PROJECTS

Citizen Traffic Camera (CTC) App

April 2026 – May 2026

[GitHub Repository](#) ; [Live App](#)

- Built a web application that allows citizens to upload traffic violations and road incident evidence for review.
- Reduced EC2 backend load by uploading videos directly to Amazon S3 using pre-signed URLs instead of routing files through the application server.
- Developed an asynchronous video processing workflow that uses AWS Lambda, SQS, and the Gemini API to analyse uploaded media and generates incident report instantly.
- Secured user data (AADHAAR Number) by enforcing HTTPS database connections and storing sensitive identifiers using salted SHA-256 double hashes.

Pay-As-You-Store Cloud Storage System (H-Drive)

February 2026 – March 2026

[GitHub Repository](#) ; [Live App](#)

- Built a serverless cloud storage application using AWS Lambda, S3, and DynamoDB for file storage and metadata management.
- Implemented direct file uploads to Amazon S3 using pre-signed URLs, reducing application server workload and improving upload performance.
- Created a notification system using SNS and SQS to track storage usage and generate billing-related alerts.
- Automated metadata synchronization between S3 and DynamoDB using Lambda triggers to keep file information updated in real time.

EDUCATION

Bachelor of Technology in Internet of Things

August 2023 – April 2027

KL University, Vaddeswaram

CGPA: 9.2

ACTIVITIES & ACHIEVEMENTS

- **Tech Lead — @Connect Club:** Mentored student teams on technical projects and coordinated department-level technical events.
- **Cricket & e-Sports Player:** Won a university cricket championship, finished runner-up in another tournament, and participated in multiple competitive e-Sports events.
