ABOUT ME

I am a Cloud and IoT focused developer with experience in building AWS-based data pipelines and edge-to-cloud systems. Skilled in Python, serverless architectures, and hardware integration with cloud platforms such as AWS and GCP.

TECHNICAL SKILLS

- **Languages:** Python, Bash, SQL, C, HTML, CSS.
- **Cloud & DevOps:** AWS, GCP, Linux, Terraform, Git.
- **Certifications:**
 - AWS Certified Solutions Architect – Associate
 - Google Cloud Associate Cloud Engineer
 - AWS Certified Cloud Practitioner

WORK EXPERIENCE

IoT Intern, TokaiEbi

(Hybrid) December 2025 - March 2026

- Developed AWS IoT ingestion pipelines to stream sensor data from edge devices to the cloud, improving reliability.
- Automated live video storage to AWS S3 for continuous remote monitoring and event analysis.
- Built an AWS Lambda alert system that routes real-time fault notifications to a React dashboard, which reduced manual monitoring.
- Integrated a Raspberry Pi with industrial sensors via I2C/SPI, sending core data to cloud services using Python SDKs.

PROJECTS

Pay-As-You-Store Cloud Storage System | [GitHub](#)

January 2026 - March 2026

Tech Stack: AWS Lambda, S3, SNS, SQS, WAF, boto3, Python, Serverless Architecture

- Built a serverless cloud storage platform for users to upload and manage files securely, with a pay-for-what-you-store model using AWS services.
- Implemented a serverless backend using Lambda to ensure high availability and reduce idle server costs.
- Designed an event-driven upload pipeline using S3 pre-signed URLs and boto3, enabling secure direct client-to-S3 uploads.
- Implemented automated storage monitoring using AWS SNS and SQS to notify users when usage exceeds defined thresholds.

Smart Attendance System | [GitHub](#)

December 2024 - Jan 2025

Tech Stack: Node.js, PostgreSQL, RFID, ESP32, AWS Lambda, API Gateway, DynamoDB, S3, CloudFront

- Built an end-to-end IoT attendance tracking system utilizing student ID cards and an ESP32 microcontroller, automating roll calls and reducing class check-in time by over 80%.
- Developed a real-time data pipeline using Node.js to process RFID scan events and store structured attendance logs in a PostgreSQL database for live monitoring.
- Migrated the system to a serverless architecture using AWS Lambda, API Gateway, DynamoDB, S3, and CloudFront, eliminating dependency on local infrastructure and improving scalability.

EDUCATION

Bachelor of Technology in Internet of Things (CGPA: 9.2)

August 2023 - April 2027

KL University, Vaddeswaram

Intermediate – MPC (Percentage: 80.1)

July 2021 - June 2023

FIITJEE Miyapur, Hyderabad

ACTIVITIES & ACHIEVEMENTS

- **Tech Lead — @Connect Club:** Mentored student teams on technical projects and helped organize department-level technical events.
- **Won a championship and secured a runner-up title** representing the university cricket team in inter-college tournaments.
- **Won** multiple inter-college BGMI esports tournaments.
